            <h1>Food Demand Forecasting</h1>
            <p>A food delivery service has to deal with a lot of perishable raw materials which makes it all,
                the most important factor for such a company is to accurately forecast daily and weekly dem
and.
                Too much inventory in the warehouse means more risk of wastage, and not enough could lea
d to out-of-stocks -
                and push customers to seek solutions from your competitors.
                The replenishment of majority of raw materials is done on weekly basis and since the raw ma
terial is perishable,
                the procurement planning is of utmost importance, the task is to predict the demand for the
next 10 weeks.</p>
